

Curriculum vitae

Personal data

Name: Ivan F.

Technical Knowledge and Skills

Node.js, React, CSS, MySQL, Javascript

Ivan is a versatile, positive, and self-motivated full-stack engineer with over four years of work experience. He specializes in full-stack, highly scalable, real-time React and Node.js applications, with past experience in PHP.

He enjoys taking on new challenges and constantly strives to learn new skills.

Ivan is a reliable problem solver who can build entire apps from scratch or optimize an existing app already in the field.

Education

September 2017 –
Present

Brazil
Technology (tecnólogo) degree, Estacio de Sa University
Technologist in Information Systems

Work experience

December 2018 -
Present

A Web App Development Agency, Brazil
Frontend engineer

Stack:

- React,
- JavaScript,

- Sass,
- Mobx,
- Styled-components,
- Webpack,
- Parceljs,

A Fintech Companie's App

February 2019 - July 2019

IT is a new fintech that uses Banco Máxima's open banking infrastructure.

It is a new fintech that uses Banco Máxima's open banking infrastructure (BBNK) to provide a bank account coupled to a company management solution for all kinds of businesses. Responsibilities: Still at Cubos, I joined the frontend team building a fully-functional MVP, delivering both banking and managing features in a single interface, all seamlessly integrated. We worked with the same technologies used on the other Cubos projects.

Technologies used:
React, Node.js

An Open Banking Solution

January 2019 - July 2019

This solution allows fintech companies to provide banking services to

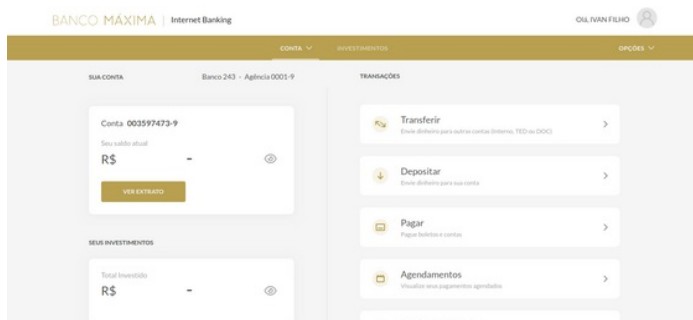

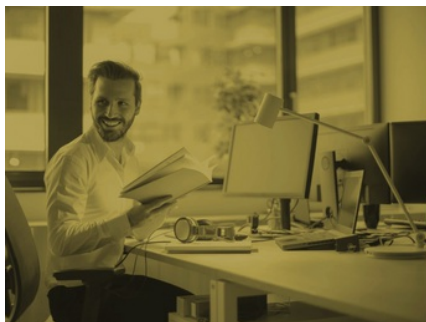

its clients using Banco Máxima's infrastructure.

Responsibilities: Along with the open API itself, we delivered a complete internal management dashboard, an authentication (OAuth) provider and a scalable whitelabel app solution for starter fintechs.

For this project, I can only provide the screenshot of the login page, since it is a private internal management system.

Technologies used:

React, Node.js

A Bank App

December 2018 - July 2019

It is an app for a Brazilian bank primarily aimed at investments and exchange.

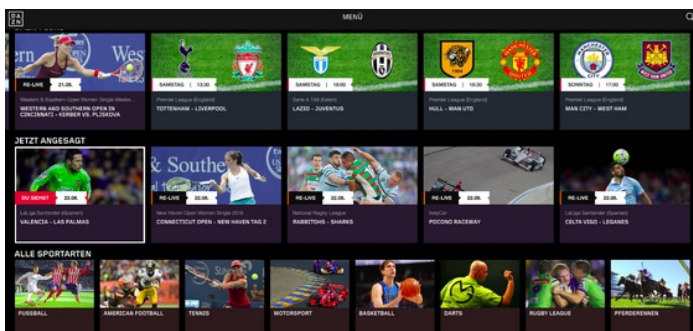

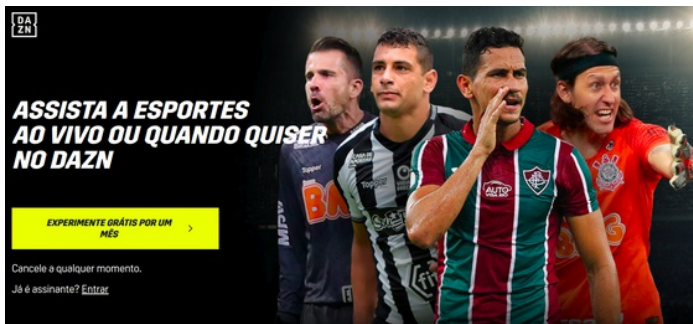

It is an app for a Brazilian bank primarily aimed at investments and exchange, which is now expanding its operations to attend both people and companies with a complete and fully digital bank account, disposing of the need of physical agencies.

Responsibilities: As a frontend engineer at Cubos, we delivered a complete internet banking app

and other separate services such as password and token validation apps. All built with our main stack at Cubos, which includes React, MobX and Node.js.

Technologies used:

React, Node.js

A Video Streaming Service

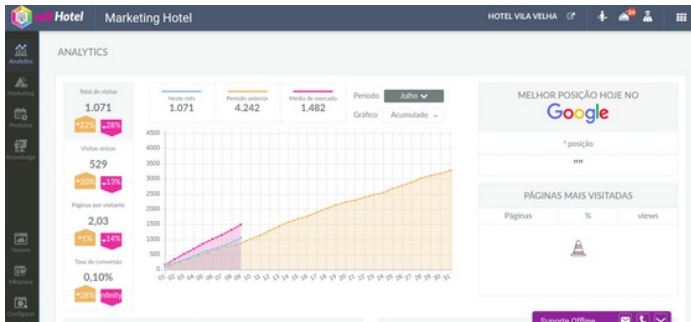

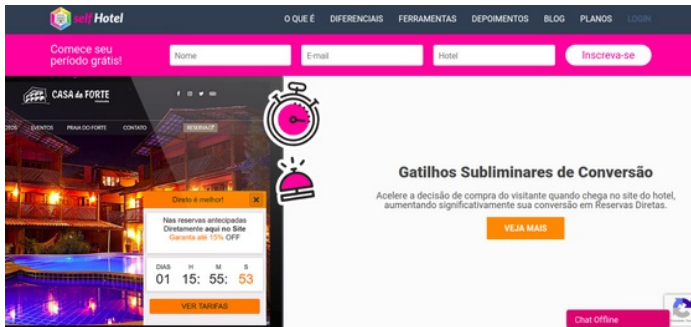

February 2018 - November 2018

A video streaming service focused on sports, offering both live and on-demand streaming of a variety of events.

I worked as a backend engineer in the infrastructure team, providing solutions to enable the migration from a C# monolithic backend to a serverless Node.js microservices model running on top of Amazon Web Services. We delivered testable multi-region deployments using IaC (Infrastructure as Code) technologies and provided fast, reliable, low-latency microservices, helping the platform to properly scale. I also started doing internal frontend work using React, such as small API testing apps and spec helpers.

Technologies used:

Node.js, React, AWS

An Automation and Digital Marketing Management Platform for Hotels

September 2015 - January 2018

Internet Marketing Hotel

It is a complete digital marketing platform for hotels and inns that enables the customer to create and easily edit a full-featured SEO-optimized website, built to scale and increase sales, along with easy social media and e-mail campaign management.

Responsibilities: I started as a frontend developer in a PHP + Bootstrap stack. A few months later, as a Project Manager, I have led the migration of our solution to a scalable modular backend built with Node.js. To consume the RESTful API, we developed a new AngularJS front-end from scratch.

Technologies used:

Node.js, Angular, MySQL
