Stack:
- C#,
- VB.Net.

Responsibilities:

- Worked on the development and maintenance of C# software. The software was in charge to run the routines updates policy on all bank computers and give a report back with all the computers state;
- Participated in network security using AirDefense Enterprise.

Portfolio

Android & iOS APP / Real Estate Company

February 2019 - March 2019

I'm the lead and architect of a mobile project for the biggest real estate of the United States. The project was built using React Native for Android and iOS. With a team size of 12 developers where I had to train some of them due to lack of knowledge on the technology. The project was done under a year of continuous work. It has deep integration with GPS and GraphQL.

Technologies used:
React, React Native

Warehouse solutions webapp

October 2018 - February 2019

I was the only front-end senior developer of a team of 2. I had the responsibility of refactoring the code to implement best practices and make the project into an MVP stage. It was built using ReactJS and MaterialUI.

Technologies used:
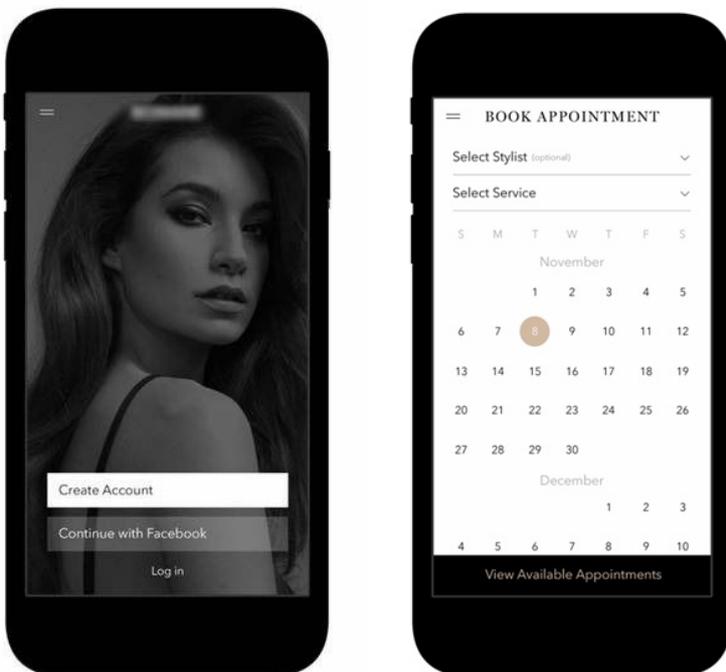

React

iOS App / Appointments
April 2018 - July 2018

I was a single developer on this project. I built a React Native APP for iOS only to handle appointments, payments, employee availability, and historical data. The main goal was to be able to reserve a service from the mobile app.

Technologies used:
React Native
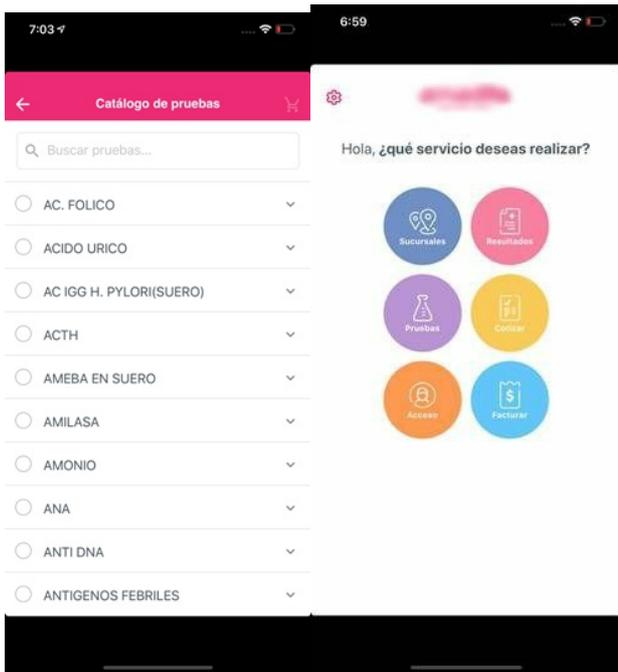

Android & iOS APP/Medical APP
August 2015 - March 2016

I was involved in the project since the beginning as a full stack developer. I built the backend using ExpressJS (Node) as a solo developer after I finished that I jumped into the mobile project that was being built by another developer in React Native. This project is the biggest clinical laboratory in the Dominican Republic and the main goal is to provide the user the ability to schedule appointments, ask for quotes, see their test results, etc.

Technologies used:
Node.js, Express.js, React Native

iOS APP/Salesforce (Lending Company)

October 2014 - February 2015

I was the main technical developer of a team of 3 people. Participated in the development of a mobile app that handles loan payments using salesforce with an offline-first approach. The goal was to be able to let the loaners to digitize their data on the spot. It was built using an Ionic and

salesforce SDK as their core engine. The project allowed dynamic UI and forms based on the templates created on salesforce.

Technologies used:
Node.js, Express.js, Angular, React Native
